Full-Stack SDE & Generative AI engineer (1+ yr) — product-focused, strong in system design, cloud-native services and agentic/GenAI pipelines. Experienced building end-to-end production-style systems (FastAPI/Node, React/Next.js), event-driven infra (Kafka, Redis), and cloud integrations (AWS & Azure). Seeking SDE / Product Engineer roles where I can ship fullstack + GenAI features.

Skills

- **Languages:** Java, Python, TypeScript, JavaScript, C#, SQL
- **Backend & APIs:** FastAPI, Express.js, NestJS, Spring Boot, .NET, REST, GraphQL, WebSocket
- **Data & Messaging:** PostgreSQL, MongoDB, Redis, Kafka, SQS, OpenSearch, Celery, InfluxDB
- **Architecture & Tools:** Microservices, System Design, Event-Driven Architecture, Git, Jira
- **Frontend:** React, Next.js, Angular, React Native, TailwindCSS, React Flow
- **Cloud & Infrastructure:** AWS (Lambda, ECS Fargate, DynamoDB, RDS/Aurora, S3 + CloudFront, API Gateway, Cognito), Azure, Docker, Kubernetes, Terraform, AWS CDK, GitHub Actions, CI/CD, Jenkins
- **GenAI & Agents:** LangChain, LangGraph, CrewAI, LangSmith, OpenAI (GPT-4), Anthropic, AWS Bedrock, RAG Systems, Vector Databases, Embeddings, Prompt Engineering, Agentic Workflows, Fine-Tuning

Experience

Software Engineer

Microsoft, Contract, Bengaluru, India

October 2025 - Current

- Develop and integrate backend microservices using Azure API Gateway, Azure Functions, and enterprise REST APIs; contribute to production-grade service design within an agile engineering team.
- Build and ship automation scripts and CI/CD pipelines (GitHub Actions, Docker) following production best practices for testing, structured logging, and zero-downtime deployment.
- Drive observability efforts by analyzing distributed telemetry and logs, authoring runbooks, and contributing to incident post-mortems — reducing mean time to resolution on recurring issues.
- Collaborate cross-functionally on system integration projects, delivering reviewed PRs and technical documentation that accelerated onboarding for new team members.

Associate Software Engineer

Prodevans Technologies Pvt Ltd, Bhubaneswar

December 2024 - August 2025

- Engineered full-stack features across React/Next.js (TypeScript) frontends and Spring Boot/NestJS backends; designed REST and GraphQL APIs serving multi-tenant workflows with role-based access control.
- Architected stateless, event-driven data pipelines using Kafka and InfluxDB, processing 100k+ events/day; reduced end-to-end latency by ~30% through Redis caching and intelligent batching strategies.
- Automated CI/CD workflows using Jenkins and GitHub Actions; containerized services with Docker and orchestrated deployments via Kubernetes, cutting release time by ~40% and enabling

weekly cadence.

- Delivered end-to-end user-facing features with a focus on UX quality and system observability; integrated monitoring dashboards tracking key service health metrics across production environments.

Projects

FinSight AI — Financial Document Analyzer

Technologies: Python, FastAPI, React, TypeScript, MongoDB, Redis, Celery, OpenAI API

- Built a full-stack app to upload financial PDFs and generate structured outputs (summary, KPIs, risk flags) via a secure REST API with JWT + RBAC.
- Designed an async pipeline (Celery + Redis) and caching to support concurrent document analysis and preserve analysis history, supporting files up to 50MB.
- Measured performance in local tests: achieved ~90% cache hit for repeated analyses and kept non-LLM metadata endpoints p95 ≈ 200ms (scripts & raw outputs in repo/tests/performance).

AgenticFlow — Agentic AI Orchestration Platform

Technologies: Python, FastAPI, Next.js, React, TypeScript, PostgreSQL, Redis, Apache Kafka, OpenAI, Anthropic, Docker, Kubernetes, WebSocket

- Built a production-ready orchestration platform with a visual drag-and-drop workflow builder (React Flow) and REST API to compose deterministic DAGs alongside LLM-powered agentic nodes for autonomous task execution.
- Architected an event-driven backend (Kafka) for workflow streaming, PostgreSQL for durable state and audit trails, and Redis for distributed locking/caching; implemented state snapshots and replay for debugging and recovery.
- Implemented multi-turn agentic nodes (GPT-4, Anthropic) with tool execution, agent-to-agent context handoffs, human-in-the-loop checkpoints, and real-time WebSocket monitoring for live observability.

Education

Bachelor of Technology in Computer Science And Engineering August 2024

Dr. A. P. J. Abdul Kalam Technical University, Lucknow, India

Courses and Certifications

- LangChain – Develop AI Agents with LangChain & LangGraph -Udemy
- Foundations of User Experience (UX) Design - Google
- Java Programming Certification – Udemy
- Cloud Engineer Professional Certificate – Coursera
