

Shubh Kamal Sharma

Full-Stack Software Engineer · AI Builder · Cloud-Native Systems

Bengaluru, India +91-8303031741 shubhpersonalok@gmail.com linkedin.com/in/shubh23 github.com/shubh2020cs157 shubh-portfolio-mu.vercel.app ↗

SUMMARY

Full-Stack SDE · **2+ years** at **Microsoft**, **Prodevans Technologies & ModelX AI** · backend in **Java (Spring Boot)**, Python (FastAPI) & Node.js. Delivers distributed backends, React/Next.js frontends, cloud infrastructure (Azure & AWS), and AI-integrated pipelines (LangChain, CrewAI). Strong in system design, observability, and full-ownership delivery.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, Java, Go, C#, Node.js, SQL
Frontend:	React, Next.js, Angular, React Native, TailwindCSS, React Flow, Redux Toolkit, MUI, Zustand
Backend & APIs:	FastAPI, Spring Boot, NestJS, Express.js, .NET, REST, GraphQL, WebSocket, JWT / OAuth2 · Microservices, System Design, Event-Driven Architecture, Git, Jira
Cloud & Infra:	Azure (API Gateway, Functions), AWS (Lambda, ECS Fargate, DynamoDB, RDS/Aurora, S3, Cognito, CDK), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions
Data & Messaging:	PostgreSQL, MongoDB, Redis, Apache Kafka, SQS, OpenSearch, InfluxDB, Celery
AI / Agents:	LangChain, LangGraph, CrewAI, OpenAI GPT-4, Anthropic Claude, AWS Bedrock, LangSmith, RAG, Vector Databases, Embeddings, Prompt Engineering, Fine-Tuning

EXPERIENCE

Software Engineer

Microsoft · Contract · Bengaluru, India

Oct 2025 – Present

- Develop and integrate backend microservices using **Azure API Gateway** and **Azure Functions**; implement enterprise REST API integrations following production best practices within an agile team.
- Drive observability across distributed systems — analyse telemetry, author runbooks, and contribute to post-mortems; build **CI/CD pipelines** (GitHub Actions, Docker) with structured logging and zero-downtime deployment.

Associate Software Engineer

Prodevans Technologies Pvt Ltd · Full-time · Bhubaneswar, India

Dec 2024 – Aug 2025

- Engineered full-stack features across **React/Next.js** frontends and **Java (Spring Boot)** / NestJS backends; designed REST and GraphQL APIs with RBAC for multi-tenant workflows.
- Architected stateless, event-driven pipelines using **Kafka** and **InfluxDB** (100k+ events/day); reduced end-to-end latency by ~30% via Redis caching and intelligent message batching.
- Automated CI/CD with **Jenkins**; containerised releases with **Docker** and orchestrated via **Kubernetes** — cut deployment time by ~40% and integrated monitoring dashboards tracking production service health.

Freelance Software Engineer

ModelX AI · Freelance · Remote (US-based startup)

Apr 2024 – Nov 2024

- Built core UI features for an enterprise AI agent SaaS — visual agent flow builder (**React Flow**, drag-and-drop LLM nodes), real-time observability dashboard, and knowledge base management; wired to REST APIs via Zustand.
- Implemented **multi-locale i18n** (next-intl) with RTL support across all routes, expanding addressable market to non-English enterprise customers.

PROJECTS

FinSight AI — Financial Document Analyzer

Python · FastAPI · React · CrewAI · LangChain · Redis · Celery · MongoDB | [GitHub](#) ↗

- Built a **CrewAI multi-agent pipeline** (financial analyst → risk assessor → report generator agents) that analyses uploaded PDFs and returns structured KPIs, executive summaries, and risk flags via a secure JWT + RBAC FastAPI backend.
- Async job queue (6 Celery task types) and two-tier Redis cache achieved ~90% cache hit on repeat analyses; non-LLM metadata endpoints **p95 ≈ 200ms**; supports PDF uploads up to 50 MB.

AgenticFlow — Multi-Agent Workflow Orchestrator

Python · FastAPI · Next.js · Kafka · PostgreSQL · Redis · Kubernetes | [GitHub](#) ↗

- Visual drag-and-drop DAG builder (React Flow) for composing deterministic and LLM-powered agentic nodes; event-driven backend with **Kafka** (3 topic streams), Redis distributed locking, and automatic retry logic.
- Multi-turn Human-in-the-Loop checkpoints, state snapshots with workflow replay, and real-time **WebSocket** monitoring; deployed on Kubernetes with GPT-4 and Anthropic Claude as interchangeable LLM backends.

Async Video Processing Engine

Python · FastAPI · Celery · Redis · PostgreSQL · Docker · FFmpeg | [GitHub](#) ↗

- Production-grade **FastAPI** backend for video processing — upload, trim, text/image overlays & watermarks, and multi-quality transcoding (1080p→360p) via **FFmpeg**; all operations offloaded to **Celery** workers (Redis broker), returning a job_id immediately for a non-blocking UX with 0–100% progress tracking.
- Dockerised** with a PostgreSQL metadata store (SQLAlchemy models), MIME/size upload validation, UUID-keyed storage, and per-video metadata extraction (duration, resolution, codec, bitrate, FPS) via FFmpeg.

EDUCATION & CERTIFICATIONS

B.Tech in Computer Science & Engineering — Dr. A.P.J. Abdul Kalam Technical University, Lucknow

Aug 2024

LangChain: AI Agents with LangChain & LangGraph (Udemy) · Cloud Engineer Professional Certificate (Coursera) · Foundations of UX Design (Google) · Java Programming (Udemy)
